2024/2025

SEASON

WHO AM I?

- **FIRST** Alumni 2003-2004 season on team 1254
- ~18 Years of mentoring with FRC teams 1254 and 2405
- 6th year mentoring with FTC teams at Fruitport and Montague
- Working at Bennett Pump as Technical Customer Service
- Electrical Certification from Van Buran Technology Center
- Studied Electrical Engineering at Lake Michigan College and Western Michigan University
- Controls Engineer by trade
- FTC Volunteer positions held
 - FTC Judge
 - CSA
 - Event VC and EC
 - Inspector
 - Field Setup
 - Pretty much every position
- Avid golfer: ex competitor on the Michigan Amateur Golf Tour
- Played Baseball at Lake Michigan College
- Other interest...
 - Ultimate Frisbee
 - Hockey
 - Baseball
 - Fishing
 - Corn hole
 - Texas hold'em

WORKSHOP BREAKDOWN

- Basic Wiring of Robot
- Motors
- Servos
- Basic Sensors
- Programming options for FTC
- Creating Op mode
- Advanced topics
- Passing Inspections
- Questions??

BASIC WIRING

Be sure to reference the Wiring Guide for FTC on our website on the [FTC Resources](#) tab or the [FIRST](#) website.

Do yourself a favor and use a grounding strap per **R611**

A. must use one of the following approved parts:

Table 12-6: Legal ROBOT Grounding Straps

Grounding Strap	Part Number
AndyMark Resistive Grounding Strap	am-4648
REV Resistive Grounding Strap	REV-31-1269

MOTORS

Be sure to reference the rules manual for current season on our website on the [FTC Resources](#) tab or the [FIRST](#) website.

12.5 Motors & Actuators

R501 ***Allowable motors.** The only allowed motor actuators are:

Table 12-1 Motor allowances

Motor Name	Part Numbers Available	Notes
AndyMark NeveRest 12V DC	am-3104	
AndyMark NeveRest Hex 12V DC	am-3104c	
goBILDA Yellow Jacket 520x Series 12V DC	5201-0002-0026, etc	5201, 5202, 5203, and 5204 series
Modern Robotics / MATRIX 12V DC	5000-0002-0001	
REV Robotics HD Hex 12V DC	REV-41-1291	
REV Robotics Core Hex 12V DC	REV-41-1300	
Studica Robotics Maverick 12V DC	75001	
TETRIX MAX 12V DC	739530	Discontinued
TETRIX MAX TorqueNADO 12V DC	W44260	
VEX EDR 393	276-2177	Counts as a servo for R503
Factory installed vibration and autofocus motors resident in COTS computing devices (e.g. rumble motor in a smartphone). Can only be used as part of the device, cannot be removed and/or repurposed. These motors do not count toward the limit in R503 .		
Motors integral to a COTS sensor (e.g. LIDAR, scanning sonar, etc.), provided the device is not modified except to facilitate mounting. These motors do not count toward the limit in R503 .		

Many legal gearmotors are sold with labeling based on the entire assembly. These motors may be used with or without the provided gearbox.

R503 ***ROBOTs are limited to a total of 8 motors and 12 servos.** A ROBOT may not have more than 8 motors and 12 servos from the allowable actuator lists per **R501** and **R502** for all MECHANISMS used in all configurations, with the following exceptions:

A. The VEX EDR 393 (276-2177) motor is counted as a servo instead of a motor.

SERVOS

Be sure to reference the rules manual for current season on our website on the [FTC Resources](#) tab or the [FIRST](#) website.

R502 *Allowable servos. Servo actuators must meet the requirements below. Servos must be compatible with the power regulation devices they are ultimately used with (per [R505](#)) and may include additional servo position output interfaces (e.g. 4th Wire Position Feedback).

Table 12-2 Servo Requirements at 6V

Actuator Class	Mechanical Output Power	Stall Current	Example Servos (including, but not limited to) NOT COMPLETE LIST
Servo	≤ 8 watts @6V	≤ 4 amps @6V	AndyMark High-Torque Servos (am-4954)
			Axon MAX+ Servo (Axon MAX+)
			DSSERVO 35KG Coreless (DS3235MG)
			FEETECH Digital Servo (FT5335M-FB)
			goBILDA Dual Mode Servo (2000-0025-0003)
			REV Robotics Smart Servo (REV-41-1097)
Linear Servo	N/A	≤ 1 amps @6V	Studica Multi-Mode Smart Servo (75002)
			Actuonix Micro Linear Servo (P8-100-252-12-R)
			Hitec Linear Servo (HLS12-3050-6V)
			Studica Linear Servo RC Actuator (75014)
<p>Servo mechanical output power is approximated by the following formula (using 6V data reported by manufacturer):</p> <ul style="list-style-type: none"> Mechanical Output Power = 0.25 x (Stall Torque in N-m) x (No Load Speed in rad/s) 			

Servos must meet both requirements to be legal for use. Refer to the Legal and Illegal Parts List for a list of servos that are pre-approved, otherwise teams must be able to provide documentation verifying servo specifications. Use the [online calculator](#) to verify output power compliance.

If a manufacturer does not provide 6V specs, any specs for voltages that exceed 6V are allowed to be used.

Stall current is the maximum stall current possible for the device at the specified voltage, regardless of any programmable software limits that may be available within the servo.

It is important to ensure the voltage provided by the intended power regulation device is within the operating voltage range of the desired servo. The REV Control Hub and REV Expansion Hub provide 5V to servos, and the REV Servo Power Module and Studica Servo Power Block provide 6V to servos. While virtually all servos are compatible with 6V, servos with an operating voltage range of 6-8.4 DCV, for example, may not work properly when only provided 5V.

R503 *ROBOTs are limited to a total of 8 motors and 12 servos. A ROBOT may not have more than 8 motors and 12 servos from the allowable actuator lists per [R501](#) and [R502](#) for all MECHANISMS used in all configurations, with the following exceptions:

A. The VEX EDR 393 (276-2177) motor is counted as a servo instead of a motor.

SENSORS

Be sure to reference the rules manual for current season on our website on the [FTC Resources](#) tab or the [FIRST](#) website.

VISION SENSOR

COMMON SENSORS

45-2018	Modern Robotics Color Sensor	
REV-31-1537	REV Color Sensor	
REV-31-1425	REV Touch Sensor	
REV-31-1505	REV 2m Distance Sensor	

PROGRAMMING OPTIONS

Be sure to reference the Programming resources on our website on the [FTC Resources](#) tab or the [FIRST](#) website.

The screenshot shows the FIRST OnBotJava interface. On the left, there's a 'Blocks' palette with categories like Gamepad, Actuators, Sensors, and Utilities. The main workspace contains a block-based program for 'MyTankDrive'. The blocks include 'Reverse one of the drive motors', 'Set Op Mode Direction', 'Call MyTankDrive', and 'Set Op Mode'. On the right, the 'Java Code' tab is active, showing the corresponding Java code for the blocks.

```
package org.firstinspires.ftc.teamcode;

import com.qualcomm.robotcore.eventloop.opmode.LinearOpMode;
import com.qualcomm.robotcore.eventloop.opmode.TeleOp;
import com.qualcomm.robotcore.hardware.DcMotor;
import com.qualcomm.robotcore.hardware.DcMotorSimple;

@TeleOp(name = "MyTankDrive (Blocks to Java)", group = "MyTankDrive")
public class MyTankDrive extends LinearOpMode {

    private DcMotor right_drive;
    private DcMotor left_drive;

    /**
     * This function is executed when this Op Mode is selected
     */
    @Override
    public void runOpMode() {
        right_drive = hardwareMap.dcMotor.get("right_drive");
        left_drive = hardwareMap.dcMotor.get("left_drive");

        // Reverse one of the drive motors.
        // You will have to determine which motor to reverse.
        // In this case, we'll reverse the right motor.
    }
}
```

The screenshot shows the Android Studio IDE with the Java code for a 'PushbotTeleopPOV_Linear' class. The code is a linear op mode that uses a gamepad to control a robot's movement. It includes comments explaining the code's structure and the hardware it uses.

```
package org.firstinspires.ftc.teamcode;

import com.qualcomm.robotcore.eventloop.opmode.LinearOpMode;
import com.qualcomm.robotcore.eventloop.opmode.TeleOp;
import com.qualcomm.robotcore.hardware.DcMotor;
import com.qualcomm.robotcore.hardware.DcMotorSimple;

@TeleOp(name = "Pushbot: Teleop POV", group = "Pushbot")
public class PushbotTeleopPOV_Linear extends LinearOpMode {

    // Declare OpMode members.
    private HardwareMap hwMap = new HardwareMap();
    private DcMotor left_drive;
    private DcMotor right_drive;
    private DcMotor motor;

    // Use a gamepad to control the robot.
    // The code is structured as a LinearOpMode.
    // This particular OpMode executes a POV game style TeleOp for a Pushbot.
    // In this mode the left stick moves the robot forward and back, the right stick turns left and right.
    // It also opens and closes the claw using the Gamepad F and B buttons respectively.
    // If you want to use the gamepad to control the robot, you must first enable the gamepad in the Driver Station.
    // Use Android Studio to Copy this class, and Paste it into your team's code folder with a new name.
    // Remove or comment out the placeholder line to use this opmode to the Driver Station OpMode list.

    @Override
    public void runOpMode() {
        // Initialize the hardware variables.
        // The SICK() method of the hardware class does all the work here.
        // See telemetry message for signals robot settings.
        robot.setHardwareMap(hwMap);
        left_drive = hwMap.dcMotor.get("left_drive");
        right_drive = hwMap.dcMotor.get("right_drive");
        motor = hwMap.dcMotor.get("motor");

        // Wait for the game to start (driver presses PLAY)
        waitForStart();

        // Main loop for the game to start (driver presses PLAY)
        while (opModeIsActive()) {
            // Handle the game logic here.
        }
    }
}
```

The screenshot shows the FIRST OnBotJava interface with the Java code for a 'MyTankDrive' class. The code is similar to the one in the previous screenshot. Below the code, a build message indicates that the code was successfully compiled.

```
package org.firstinspires.ftc.teamcode;

import com.qualcomm.robotcore.eventloop.opmode.LinearOpMode;
import com.qualcomm.robotcore.eventloop.opmode.TeleOp;
import com.qualcomm.robotcore.hardware.DcMotor;
import com.qualcomm.robotcore.hardware.DcMotorSimple;

@TeleOp(name = "MyTankDrive (Blocks to Java)", group = "")
public class MyTankDrive extends LinearOpMode {

    private DcMotor right_drive;
    private DcMotor left_drive;

    /**
     * This function is executed when this Op Mode is selected fr
     */
    @Override
    public void runOpMode() {
    }
}
```

Build started at Mon Jun 17 2019 15:45:25 GMT-0400 (Eastern Daylight Time)

Build finished in 2.9 seconds

Build succeeded!

The screenshot shows the Android Studio IDE with a simple Java code snippet for a 'main' function. The code is a basic example of a main function that prints the name of a variable and loops over a range of numbers.

```
Simple Asynchronous Object-oriented Functional Ideal for tests

fun main() {
    val name = "stranger" // Declare your first variable
    println("Hi, $name!") // ...and use it!
    print("Current count:")
    for (i in 0..10) { // Loop over a range from 0 to 10
        print("$i")
    }
}
```

CREATING OP MODES

Be sure to reference the Programming resources on our website on the [FTC Resources](#) tab or the [FIRST](#) website.

```
to runOpMode
  Put initialization blocks here.
  call MyFIRSTOpMode . waitForStart
  if call MyFIRSTOpMode . opModelsActive
  do
    Put run blocks here.
    repeat while call MyFIRSTOpMode . opModelsActive
    do
      Put loop blocks here.
      set tgtPower to gamepad1 . LeftStickY
      set motorTest . Power to tgtPower
      call Telemetry . addData
      key "Target Power"
      number tgtPower
      call Telemetry . addData
      key "Motor Power"
      number motorTest . Power
      call Telemetry . update
```

ADVANCED TOPICS

Be sure to reference the Programming resources on our website on the [FTC Resources](#) tab or the [FIRST](#) website.

AprilTag Programming

Topics for programming with AprilTags

- [AprilTag Introduction](#)

PASS INSPECTION WITH A BREEZE

- **R712** *Always keep control system device software up to date.
- **R501** and **R502** Use LEGAL motors and servos (use this [list](#))
- **R101** Keep it in the cube 18 x 18 x 18
- **R104** There is a horizontal expansion limit.
- **R401-R403** New 12.4 ROBOT SIGN rules – No alliance makers anymore
- **R609.C** Do not forget Power Switch Label
- Know your robot!
- DO NOT be scared of the inspectors! Them and other teams will help if you fail anything
- Do a pre-inspection before your competition (use [Robot inspection checklist](#) and [Field Inspection](#).)
- **READ** and know the robot build rules!
- If something does fail inspection, ask questions and work with the inspector on a resolution
- Show off your robot. Inspection is good practice for judging
